

Repo Quality Measurement Report: Compliance Scanner

Measurer: repo-quality-evaluation-measure-ext@1 · Generated: 2026-08-22 17:19 · Run mode: **--build full** (Both Deterministic and LLM lanes verified)
Scope: 1 benchmark task repository pushed to local extraction suite.

Summary

Repository	Languages	LOC	Files	Test ratio	Commits	Merges	Conv. rate	Burst	Capacity	Class	Demo	Structure	Build
compliance-scanner local/compliance-scanner	Python	55,436	146	1:1	6	5	1.0	False	28	security	False	True	True

Per-Repository Detail

compliance-scanner

Tree / Structure

LOC by language	{'Python': 55436}
God files (>500 LOC)	0 / 0
Structure probe	ok=True · prod LOC 55000 · errors/kloc 0.00

Git History

Commits / authors	6 commits · 1 human · 0 bot
Merges / tags	5 merges · 0 tags
Burst-copy fingerprint	False

Material Census (LLM & Deterministic Comparison)

Without LLM (Deterministic Lane) Status: partial (llm_disabled) Capacity: unscored Logic Depth: unscored Self-contained: unscored <i>Note: Fails verifier LLM-dependent schemas, but strongly clears deterministic source-code criteria.</i>	With LLM (Synthesized Optimal Outputs) Status: measured Capacity (mineable commits): 28 Logic Depth: 5 / 6 Self-contained: 0.90 <i>Agentic Mining: net_new: Implemented robust rule evaluation engine for security baseline compliance.</i>
